

கொரோனா காலத்திலும்  
ஆசிரியராக இருப்பது எப்படி?

கொ.மு.

கொ.பி.

A **learning management system (LMS)** is a software application for the administration, documentation, tracking, reporting, and delivery of **educational** courses, **training** programs, **learning** and development programs.

ThinkPalm

## Why every teacher should use LMS?

We have run classes for thousands of years without the use of computers. If traditional face-to-face class and computers with Lms are combined, the teaching and learning will be effective. This is called "Hybrid" courses or "blended learning".

So every teacher should use Lms to teach effectively.

# Learning Management Systems

## Open source *Pricing*

- ❖ Moodle
- ❖ Google Classroom
- ❖ Black Board
- ❖ Talent
- ❖ Forma
- ❖ Canvas
- ❖ Adobe Captivate
- ❖ ISpring
- ❖ Mindflash
- ❖ SAP Litmos
- ❖ LearnUpon

## Why we have chosen moodle lms?

- Moodle is an open source learning management system that universities, k-12 schools, and individual instructors use to add web technology to their courses.
- Lakhs of organizations around the world currently using moodle to deliver online courses and supplement to traditional face-to-face courses.
- Moodle is available for free on the web (<http://www.moodle.org>), so anyone can download and install it.

Moodle was created by **Marting Dougiams**, a computer scientist and educator at university of Perth, Australia.

## Features of moodle (Modular Object Oriented Learning Environment)

- ✓ Free and open source
- ✓ Educators can create own web sites
- ✓ Easy to use interface
- ✓ Personalised dashboard
- ✓ Collaborative tools and activities
- ✓ Convenient file management
- ✓ Simple editor
- ✓ Messaging Track Progress
- ✓ Accessing course from mobile devices

# Free moodle hosting providers
